## EFM32PG28 Errata

---

This document contains information on the EFM32PG28 errata. The latest available revision of this device is revision A.

Errata that have been resolved remain documented and can be referenced for previous revisions of this device.

The device data sheet explains how to identify the chip revision, either from the package marking or electronically.

Errata effective date: February, 2023.

## 1. Errata Summary

The table below lists all known errata for the EFM32PG28 and all unresolved errata of the EFM32PG28.

**Table 1.1. Errata Overview**

| Designator | Title/Problem  | Workaround<br>Exists | Exists on<br>Revision: |
|------------|--|----------------------|------------------------|
|            |  |                      | A                      |
| LCD_E301   | <a href="#">LOADBUSY Status Goes Inactive Early With Prescaled Clock</a> | Yes                  | X                      |

## 2. Current Errata Descriptions

### 2.1 LCD\_E301 — LOADBUSY Status Goes Inactive Early With Prescaled Clock

|  |
|--|
| <b>Description of Errata</b>   |
| The LCD_STATUS_LOADBUSY bit erroneously reports completion of writes to the LCD_BACTRL, LCD_AREGA, LCD_AREGB, and LCD_SEGDn registers before synchronization is complete when LCD_CTRL_PRESCALE > 3.   |
| <b>Affected Conditions / Impacts</b>   |
| If LOADBUSY is used to gate consecutive writes to one of the affected registers, only the data associated with the last write is guaranteed to be latched into the register.   |
| <b>Workaround</b>  |
| <p>For each write to one of the affected registers, insert a delay equal to <math>\text{LCD\_CTRL\_PRESCALE} \div f_{\text{LCDCLK}}</math> after LOADBUSY transitions from 1 to 0 before issuing the next write to the same register.</p> <p><b>Note:</b> LOADBUSY reports when data written from the PCLK register domain into the LCD controller's low-frequency clock domain has been synchronized. It does not indicate when data written into one of the affected registers is actually driven on the LCD controller pins.</p> <p>In cases where writes to these registers, such as LCD_SEGDn, are intended to have the change in pin state be observable on the connected display, LOADBUSY should not be used to gate consecutive writes. Instead, the CPU should issue the register write and wait to issue the next write until a display update event or frame counter update event occurs as reported by the LCD_IF register DISPLAY or FC flag bits. Interrupts associated with these flags can and should be enabled in such cases to minimize energy use by keeping the CPU in a low-energy mode (e.g., EM2) between such consecutive register writes.</p> |
| <b>Resolution</b>  |
| There is currently no resolution for this issue.   |

### 3. Revision History

#### Revision 0.1

February, 2023

- Initial release.

## Disclaimer

Silicon Labs intends to provide customers with the latest, accurate, and in-depth documentation of all peripherals and modules available for system and software implementers using or intending to use the Silicon Labs products. Characterization data, available modules and peripherals, memory sizes and memory addresses refer to each specific device, and "Typical" parameters provided can and do vary in different applications. Application examples described herein are for illustrative purposes only. Silicon Labs reserves the right to make changes without further notice to the product information, specifications, and descriptions herein, and does not give warranties as to the accuracy or completeness of the included information. Without prior notification, Silicon Labs may update product firmware during the manufacturing process for security or reliability reasons. Such changes will not alter the specifications or the performance of the product. Silicon Labs shall have no liability for the consequences of use of the information supplied in this document. This document does not imply or expressly grant any license to design or fabricate any integrated circuits. The products are not designed or authorized to be used within any FDA Class III devices, applications for which FDA premarket approval is required or Life Support Systems without the specific written consent of Silicon Labs. A "Life Support System" is any product or system intended to support or sustain life and/or health, which, if it fails, can be reasonably expected to result in significant personal injury or death. Silicon Labs products are not designed or authorized for military applications. Silicon Labs products shall under no circumstances be used in weapons of mass destruction including (but not limited to) nuclear, biological or chemical weapons, or missiles capable of delivering such weapons. Silicon Labs disclaims all express and implied warranties and shall not be responsible or liable for any injuries or damages related to use of a Silicon Labs product in such unauthorized applications.
