The Silicon Labs UZB-7, Z-Wave 700 Stick Bridge Module is a simple reference design featuring the latest generation Z-Wave SoC, the EFR32ZG14 Zen Gecko, as a gateway and controller for smart home applications.

The UZB-7 exposes the well-documented and proven Z-Wave Serial API via USB. It allows the host processor to control up to 232 Z-Wave and Z-Wave Plus devices through the Z-Wave protocol. With the developer PC application software, PC Controller, or any software compliant with Z-Wave Serial API, the host is empowered to communicate with various Z-Wave devices through the Z-Wave Command Classes, making your computer the heart of your Z-Wave network.

Controller software base on Z/IP from Silicon Labs, such as Z-Ware enables you to create your own Z-Wave gateway that is locally or remotely hosted with a PC or single-board computers, such as Beagle Bone Black and Raspberry Pi.

Z-Wave is an established short-range, interoperable, two-way RF mesh network technology. Refer to [http://www.z-wave.com](http://www.z-wave.com) for the technology description, various Z-Wave Plus ready certified products, and Z-Wave Alliances.

Key Features & Benefits

- Z-Wave 700 Series EFR32ZG14
  - CPU core: ARM ® Cortex-M4 ® with FPU
  - -97 dBm sensitivity with 100 kbps channels
  - Firmware upgradable through USB
  - AES 128-bit encrypted communication and security feature
  - Compliance approval (tbc)
    - EU
      - EN 300220
    - US
      - FCC CFR47 Part 15.249
    - ANZ
      - ANZ 4268
    - Japan
      - ARID STD-T108
  - Worldwide SAW filters for additional out-of-band blocking
  - CP2102N USB-to-UART SoC for VCP
  - USB 2.0 Full Speed Compliance
  - Royalty-free Virtual COM port drivers, CP210x VCP Driver
  - Work with Windows / Mac / Linux
**Product Specifications**

**Z-Wave Libraries**

- Z-Wave Library: Bridge Controller
- Z/IP Application: Version 5.64 or later
- Z-Wave DLL: Version 5.64 or later

**Ordering Information**

- SLUSB7000A: UZB-7 BRD1001A

---

**General Specifications**

ERF32ZG14 Zen Gecko SoC

- USB powered: 5.00 ± 0.25 V
- RF Transmit current: 22 mA (typ.)
- RF Receive current: 20 mA (typ.)
- RF Transmit power: Up to +13 dBm (max.)
- RF Sensitivity:
  - 9.6 kbps: 101 dBm (typ.)
  - 40 kbps: 100 dBm (typ.)
  - 100 kbps: 97 dBm (typ.)
- Operating Temperature: -20 to 75°C
- Internal antenna: PCB antenna
- Sleep current: < 25 µA
- Range: 100 m open space line-of-sight

**Note**

*1 Allowable transmit power are governed by respective regulatory
*2 UZB-7 is typically always active

**Block diagram**

Refer to [1] UZB-7 Reference Manual for further descriptions of each blocks, design considerations and options for UZB-7.
Quick Start Up

Here is a Quick Start Up guide to get UZB-7 to work with the Z-Wave PC Controller. The Z-Wave PC Controller is a PC application software tool that enables communications with Z-Wave nodes, such as switches and sensors.

1. Connect UZB-7 to your computer.
2. Install the Virtual COM Port (VCP) drivers and CP210x VCP Drivers, if required by your Operating System. The latest drivers are available at [www.silabs.com/interface-software](http://www.silabs.com/interface-software).
   *Note:* The driver is WHQL certified. No installation is required for Window OS.
3. Install and Run the Z-Wave PC Controller from Simplicity Studio.
4. Click on the “Setting-wheel” in the Right-Top corner of the PC Controller and select “Silicon Labs CP210x USB to UART Bridge”. Click OK.
5. Click on Network Management

6. UZB-7 is detected and appears as [S2] Pc Controller. The bottom panel displays that the Z-Wave Command Class is supported by UZB-7.

EU Declaration of Conformity *1

This device complies with Radio Equipment Directive 2014/53/EU issued by the Commission of the European Community. The following test methods have been applied in order to prove presumption of conformity with the essential requirement of the directive.

EN 300 220-1: V3.1.1 : 2017
EN 300 220-2: V3.1.1 : 2017
EN 301 489-1: V2.1.1 (2017-02)
Final draft EN 301 489-3: V2.1.1 (2017-03)
EN 62479 : 2010
EN 62368-1 : 2014

FCC Federal Notice *1

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in an installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Any changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate this equipment.

This transmitter must not be co-located or operated in conjunction with any other antenna or transmitter.

Note* 1 To be updated. Regulatory testing ongoing.

Disclaimer
Silicon Labs intends to provide customers with the latest, accurate, and in-depth documentation of all peripherals and modules available for system and software implementers using or intending to use the Silicon Labs products. Characterization data, available modules and peripherals, memory sizes and memory addresses refer to each specific device, and "typical" parameters provided can and do vary in different applications. Application examples described herein are for illustrative purposes only. Silicon Labs reserves the right to make changes without further notice to the product information, specifications, and descriptions herein, and does not give warranties as to the accuracy or completeness of the included information. Without prior notification, Silicon Labs may update product firmware during the manufacturing process for security or reliability reasons. Such changes will not alter the specifications or the performance of the product. Silicon Labs shall have no liability for the consequences of use of the information supplied in this document. This document does not imply or expressly grant any license to design or fabricate any integrated circuits. The products are not designed or authorized to be used within any FDA Class III devices, applications for which FDA premarket approval is required or Life Support Systems without the specific written consent of Silicon Labs. A "Life Support System" is any product or system intended to support or sustain life and/or health, which, if it fails, can be reasonably expected to result in significant personal injury or death. Silicon Labs products are not designed or authorized for military applications. Silicon Labs products shall not under any circumstances be used in weapons of mass destruction including (but not limited to) nuclear, biological or chemical weapons, or missiles capable of delivering such weapons. Silicon Labs disclaims all express and implied warranties and shall not be responsible or liable for any injuries or damages related to use of a Silicon Labs product in such unauthorized applications.
