## 12/8/4 出力 PCI-Express 低ジッタ、低消費電力、第 1/2/3/4 世代 SRIS クロック・バッファ

Si53212、Si53208、および Si53204 は、12、8、または 4 つの 100 MHz PCIe クロック出力を供給できる、業界最高性能、低付加ジッタ、低消費電力の PCIe クロック・ファンアウト・バッファ・ファミリです。すべての差動クロック出力は、PCIe 第 1/2/3/4 世代の共通クロックと個別の基準クロックの仕様に準拠しています。このバッファ・ファミリには、拡散入力クロックをパス・スルーするためのスペクトラム拡散トレラントがあります。それぞれのデバイスには、個別のハードウェア出力に対応する制御ピンが装備されており、各差動出力の有効と無効を切り替えることができます。また、デバイスは 100 MHz 以外に 10 MHz ~ 200 MHz の入力周波数にも対応できます。すべてのデバイスは小型の QFN パッケージに収納されています。この PCIe クロック・ファンアウト・バッファ・ファミリは設置面積が小さく、消費電力も低いため、産業用および民生用アプリケーションに理想的です。PCI-Express 準拠を確認するには、Silicon Labs PCIe クロック・ジッタ・ツールを使用して PCIe クロック・ジッタを迅速かつ簡単に測定できます。ツールは <http://www.silabs.com/pcie-learningcenter> から無料でダウンロードできます。

## 5. Functional Description

### 5.1 OEB Pin

The OEB pin is an active low input used to enable and disable the output clock. To enable the output clock, the OEB pin needs to be logic low. By default, the OEB pin is set to logic low. To disable the output clock, the OEB pin is pulled to a logic high. The OEB pin is required to be driven at all times even though it has an internal pull-down resistor.

This pin has an internal 100 k $\Omega$  pull-down resistor.

### 5.2 OEB Assertion

The OEB pin is an active low input used for synchronous stopping and starting the respective output clock while the rest of the device continues to function. The assertion of the OEB function is achieved by pulling the OEB pin high, which causes the respective stopped output to resume normal operation. No short or stretched clock pulses are produced when the clocks resume. The maximum latency from the assertion to active outputs is no more than two to six output clock cycles.

### 5.3 OEB Deassertion

The OEB function is deasserted by pulling the high. The corresponding output is stopped cleanly and the final output state is driven low.

## 7. PCIe Clock Jitter Tool

The PCIe Clock Jitter Tool is designed to enable users to quickly and easily take jitter measurements for PCIe Gen1/2/3/4 and SRNS/SRIS. This software removes all the guesswork for PCIe Gen1/2/3/4 and SRNS/SRIS jitter measurements and margins in board designs.

This software tool will provide accurate results in just a few clicks, and is provided in an executable format to support various common input waveform files, such as .csv, .wfm, and .bin. The easy-to-use GUI and helpful tips guide users through each step. Release notes and other documentation are also included in the software package.
