

Software Release Note

Z-Ware SDK 7.13.1

Document No.:	SRN14426
Version:	13
Description:	Z-Ware is a Z-Wave Plus v2 SmartStart Web Gateway over ZIPGW. It comes with sample Z-Ware Apps as native iOS/Android apps and web pages for Tablet & Phone

1 Introduction

1.1 Purpose

Z-Wave is a Z-Wave web gateway over ZIPGW (Z-Wave for Internet Protocol Gateway). It is available in Portal and CE (Consumer Electronic) modes in separate binaries. See the Web User Guide listed in Section 2.2 for more information.

This document lists the release artefacts and new features.

1.2 Audience and Prerequisites

Intended for Z-Wave Partners only.

2 Contents

2.1 Component Versions

Component	Version
Web server	1.41.04
C Library	10.05
Z-Ware iOS/Android/Web App	21.46
PyZWare	1.00

2.2 Documents

File	Description
zware.tar.gz	Web Server & pages. Library is found in src/zwave/hcapi
zware_apps.zip	iPhone/iPad & Android App

pyzware_src.zip	PyZWare python source
-----------------	-----------------------

3 Feature Changes

Z-Wave SDK v7.13.1 is a mature release with ZIPGW & Protocol SDKs v7.13.1. It is not compatible with earlier ZIPGW versions owing to changes in wake up and failed nodes handling. Feature changes are listed with respect to v7.11.x.

3.1 Compliance

The portal version has been tested on PC with Ubuntu 16.04 and 18.04 LTS, while the CE version has been tested on RPi3B+ as the primary hardware platform. This release has passed Z-Wave Plus v2 certification (Cert #: ZC12-20010027) with the following waiver.

Heading	Requirement	Reason for Allowance
CCR.1.1.14	Always use highest version of CC	The product uses the version of CC which is supported by the individual products included to the Controller. This behavior will be formally allowed in the next version of the Z-Wave Specification. This does not affect interoperability.

3.2 All

- Adds CC control for Door Lock Logging v1 and Protection v1-2
- Adds Node Identify facility
- Updated OpenSSL library to v1.0.2t
- Supports non-DTLS connection to ZIPGW
- Fixed various defects – see ERN14427

3.3 Library

- Uses ZIPGW mailbox for queuing commands to sleeping nodes
 - Removes command queueing interface
- Uses NW MGMT PROXY CC v3 for failed node detection
- Moves Multi-command CC support to ZIPGW
- Uses MultiChannel CC bit addressing mode in zwif_xxx_mset commands, but only enabled if ZIPGW supports ZIP CC v5
- Enhanced demo app "controller_app" with SmartStart, Network health, Update Node, Update Network, Door Lock CC, Notification CC
- Supports Big-endian systems

3.4 Device database

- v8.1
- entry "send_encap" in to control whether to send consecutive commands within a time window of 0.4 second using multi-cmd encapsulation – to fix quirk in devices that don't have multi-cmd correctly

3.5 Web Server

- None

3.6 Scenes

- None

3.7 Apps

- None

5 Patches

Patches will be released if and when subsequent Z-Wave certification issues or critical failures are found after the initial successful Z-Ware certification and release. The library and web patch will be in separate files and need to be applied to separate directories.

Component	Source Directory	Patch File
Library	zwportal/src/zwave/hcapi	None
Web	zwportal	None

Apply the patch to the original source code as in Section 2.4 after unpacking. To apply the patch:

```
cd <source directory>
patch -p1 <patch file>
```

This patch solves the following defects:

None
