Proprietary Flex SDK 3.5.3.0 GA
Gecko SDK Suite 4.2
May 3, 2023

The Proprietary Flex SDK is a complete software development suite for proprietary wire-
less applications. Per its namesake, Flex offers two implementation options.

The first uses Silicon Labs RAIL (Radio Abstraction Interface Layer), an intuitive and eas-
ily-customizable radio interface layer designed to support both proprietary and standards-
based wireless protocols.

The second uses Silicon Labs Connect, an IEEE 802.15.4-based networking stack de-
dsigned for customizable broad-based proprietary wireless networking solutions that re-
quire low power consumption and operates in either the sub-GHz or 2.4 GHz frequency
bands. The solution is targeted towards simple network topologies.

The Flex SDK is supplied with extensive documentation and sample applications. All ex-
amples are provided in source code within the Flex SDK sample applications.

These release notes cover SDK version(s):
3.5.3.0 GA released May 3, 2023
3.5.2.0 GA released March 8, 2023
3.5.1.0 GA released February 1, 2023
3.5.0.0 GA released December 14, 2022

Compatibility and Use Notices
For information about security updates and notices, see the Security chapter of the Gecko Platform Release notes installed with this
SDK or on the TECH DOCS tab on https://www.silabs.com/developers/flex-sdk-connect-networking-stack. Silicon Labs also strongly
recommends that you subscribe to Security Advisories for up-to-date information. For instructions, or if you are new to the Silicon Labs
Flex SDK, see Using This Release.

Compatible Compilers:
IAR Embedded Workbench for ARM (IAR-EWARM) version 9.20.4
• Using wine to build with the iarBuild.exe command line utility or IAR Embedded Workbench GUI on macOS or Linux could result in
incorrect files being used due to collisions in wine’s hashing algorithm for generating short file names.
• Customers on macOS or Linux are advised not to build with IAR outside of Simplicity Studio. Customers who do should carefully
verify that the correct files are being used.

GCC (The GNU Compiler Collection) version 10.3-2021.10, provided with Simplicity Studio.

1 Connect Applications

1.1 New Items

Added in release 3.5.0.0
- XG24 Support

1.2 Improvements

Changed in release 3.5.0.0
- OQPSK Long Range PHYs for XFG23

1.3 Fixed Issues

None

1.4 Known Issues in the Current Release

Issues in bold were added since the previous release. If you have missed a release, recent release notes are available on the TECH DOCS tab on https://www.silabs.com/developers/flex-sdk-connect-networking-stack.

<table>
<thead>
<tr>
<th>ID #</th>

3.4 Known Issues in the Current Release

None

3.5 Deprecated Items

None

3.6 Removed Items

Removed in release 3.5.0.0
- RAIL SoC Long Preamble Duty Cycle (Legacy)
- RAIL SoC Light Standard
- RAIL SoC Switch Standard
4 RAIL Library

4.1 New Items

**Added in release 3.5.2.0**
- Added `RAIL_PacketTimeStamp_t::packetDurationUs` field, which is currently set only on EFR32xG25 for received OFDM packets.

**Added in release 3.5.0.0**
- Added HFZO temperature compensation in RAIL on platforms that support RAIL_SUPPORTS_HFZO_COMPENSATION. This feature can be configured with the new `RAIL_ConfigHFZOCompensation()` API. The user will also need to be sure to handle the new RAIL_EVENT_THERMISTOR_DONE event to trigger a call to RAIL_CalibrateHFZO to perform the compensation.
- Added options in "RAIL Utility, Protocol" component to control whether Z-Wave, 802.15.4 2.4 GHz and Sub-GHz, and Bluetooth LE are enabled so that the user can save space in their application by disabling unused protocols.
- Added a new API `RAIL_ZWAVE_PerformIrcal` to help perform an IR calibration across all the different PHYs used by a Z-Wave device.
- Added 40 MHz crystal support on EFR32xG24 devices to the "RAIL Utility, Built-in PHYs Across HFZO Frequencies" component.
- Added support for IEEE 802.15.4 fast RX channel switching with the new `RAIL_IEEE802154_ConfigRxChannelSwitching` API on supported platforms (see RAIL_IEEE802154_SupportsRxChannelSwitching). This feature allows us to simultaneously detect packets on any two 2.4 GHz 802.15.4 channels with a slight reduction in overall sensitivity of the PHY.
- Added a new Thermal Protection feature, on platforms that support RAIL_SUPPORTS_THERMAL_PROTECTION, to track temperature and prevent transmits when the chip is too hot.
- Added new table-based OFDM and FSK PAs for EFR32xG25 based devices. The output power of these can be modified through a new customer provided look-up table. Ask support or look for an updated app note on how to configure the values in this table for your board.
- Added support for the MGM240SA22VNA, BGM240SA22VNA, and BGM241SD22VNA modules and updated the configurations for the BGM240SB22VNA, MGM240SB22VNA, and the MGM240SD22VNA.

4.2 Improvements

**Changed in release 3.5.2.0**
- Added new `RAIL_ZWAVE_OPTION_PROMISCUOUS_BEAM_MODE` to trigger RAIL_EVENT_ZWAVE_BEAM on all beam frames.
- Added `RAIL_ZWAVE_GetBeamHomeldHash()` to retrieve the beam frame's HomeldHash when handling that event and made sure that the HomeldHash byte is now present on PTI for Z-Wave beam frames even when Nodeld does not match.

**Changed in release 3.5.1.0**
- Corrected the sign of the frequency error reported by RAIL_GetRxFreqOffset() when using OFDM on the EFR32xG25 to match how this was handled for other modulations (e.g. Freq_error=current_freq-expected_freq).
- The RAIL_SetTune() and RAIL_GetTune() functions now use the CMU_HFXOCTuneSet() and CMU_HFXOCTuneGet() functions respectively on EFR32xG2x and newer devices.

**Changed in release 3.5.0.0**
- The RAIL_ConfigRfSenseSelectiveOokWakeupPhy() will now return an error when run on the EFR32xG21 platform because this device cannot support the wakeup PHY.
- Updated the pa_customer_curve_fits.py helper script to accept floating point value for the maximum power argument, similar to the increment argument.
- Added support in "RAIL Utility, Coexistence" component for configuring priority options when directional priority is enabled but no static priority GPIO is defined.
- Broke up some EFR32xG12 802.15.4 dynamic FEC code to save code size for Zigbee and Bluetooth LE, which never need this functionality.
- Remove "RAIL Utility, Coexistence" component dependency from the RAIL Utility, Coulomb Counter component.
- The RAIL_PrepareChannel() function has been made dynamic multiprotocol safe and will no longer return an error if called when your protocol is inactive.
## 4.3 Fixed Issues

**Fixed in release 3.5.3.0**

<table>
<thead>
<tr>
<th>ID #</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1058480</td>
<td>Fixed an RX FIFO corruption on EFR32xG25 that occurred when receiving/sending certain OFDM packets using FIFO mode.</td>
</tr>
<tr>
<td>1109993</td>
<td>Fixed an issue in the &quot;RAIL Utility, Coexistence&quot; component so that it simultaneously asserts request and priority if request and priority share the same GPIO port and polarity.</td>
</tr>
<tr>
<td>1118063</td>
<td>Fixed issue with recent RAIL_ZWAVE_OPTION_PROMISCUOUS_BEAM_MODE on EFR32xG13 and xG14 where theNodeId of the promiscuous beam was not properly recorded for RAIL_ZWAVE_GetBeamNodeid(), causing it to report 0xFF.</td>
</tr>
<tr>
<td>1126343</td>
<td>Fixed an issue on EFR32xG24 when using the IEEE 802.15.4 PHY where the radio could become stuck when doing an LBT transmit if a frame is received during the CCA check window.</td>
</tr>
</tbody>
</table>

**Fixed in release 3.5.2.0**

<table>
<thead>
<tr>
<th>ID #</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>747041</td>
<td>Fixed an issue on the EFR32xG23 and EFR32xG25 that could cause certain radio actions to delay for extended periods of time when the main core enters EM2 while the radio is still running.</td>
</tr>
<tr>
<td>1077623</td>
<td>Fixed an issue on EFR32ZG23 where multiple beam frames were lumped together on PTI as one large beam chain.</td>
</tr>
<tr>
<td>1090512</td>
<td>Fixed an issue in the &quot;RAIL Utility, PA&quot; component where certain functions would attempt to use the RAIL_TX_POWER_MODE_2P4GIG_HIGHEST macro even though they didn’t support it. Previously this resulted in undefined behavior but will now correctly error.</td>
</tr>
<tr>
<td>1090728</td>
<td>Fixed a possible RAIL_ASSERT_FAILED_UNEXPECTED_STATE_RX_FIFO issue on EFR32xG12 with RAIL_IEEE802154_G_OPTION_GB868 enabled for a FEC-capable PH,Y which can happen when aborting a packet at frame detection, for instance by idling the radio.</td>
</tr>
<tr>
<td>1092769</td>
<td>Fixed an issue when using Dynamic Multiprotocol and BLE Coded PHYs where a transmit could underflow depending on what protocol was active when the PHY and syncword were loaded.</td>
</tr>
<tr>
<td>1103966</td>
<td>Fixed an unexpected Rx packet abort on the EFR32xG25 when using the Wi-SUN OFDM option4 MCS0 PHY.</td>
</tr>
<tr>
<td>1105134</td>
<td>Fixed an issue when switching certain PHYs that could cause the first received packet to be reported as RAIL_RX_PACKET_READY_CRC_ERROR instead of RAIL_RX_PACKET_READY_SUCCESS. This issue could potentially impact EFR32xG22 and newer chips.</td>
</tr>
<tr>
<td>1109574</td>
<td>Fixed an issue on EFR32xG22 and newer chips where a radio sequencer assert could cause the application to hang in an ISR rather than report the assert via RAILCb_AssertFailed().</td>
</tr>
</tbody>
</table>

**Fixed in release 3.5.1.0**

<table>
<thead>
<tr>
<th>ID #</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1077611</td>
<td>Fixed an issue on the EFR32xG25 that would cause a 40 µs porch before an OFDM TX.</td>
</tr>
<tr>
<td>1082274</td>
<td>Fixed an issue on the EFR32xG22, EFR32xG23, EFR32xG24, and EFR32xG25 chips that could cause the chip to lock up if the application attempted to re-enter EM2 within ~10 µs after wake-up and hit a &lt;0.5 µs timing window. If hit, this lockup required a power on reset to restore normal operation to the chip.</td>
</tr>
</tbody>
</table>

**Fixed in release 3.5.0.0**

<table>
<thead>
<tr>
<th>ID #</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>843708</td>
<td>Moved function declarations from rail_features.h to rail.h to avoid a convoluted include dependency order.</td>
</tr>
<tr>
<td>844325</td>
<td>Fixed RAIL_SetTxFifo() to properly return 0 (error) rather than 4096 for an undersized FIFO.</td>
</tr>
<tr>
<td>845608</td>
<td>Fixed an issue with the RAIL_ConfigSyncWords API when using certain underlying demodulator hardware on EFR32xG2x parts.</td>
</tr>
</tbody>
</table>
### 4.4 Known Issues in the Current Release

Issues in bold were added since the previous release.

<table>
<thead>
<tr>
<th>ID #</th>
<th>Description</th>
<th>Workaround</th>
</tr>
</thead>
<tbody>
<tr>
<td>851150</td>
<td>Fixed an issue on EFR32xG2 series devices where the radio would trigger RAIL_ASSERT_SEQUENCER_FAULT when PTI is used and GPIO configuration is locked. GPIO configuration can only be locked when PTI is disabled. See RAIL_EnablePti() for further information.</td>
<td></td>
</tr>
<tr>
<td>857267</td>
<td>Fixed an issue when using the &quot;RAIL Utility, Coexistence&quot; component with TX abort, the signal identifier feature and DMP.</td>
<td></td>
</tr>
<tr>
<td>1015152</td>
<td>Fixed an issue on EFR32xG2x devices where RAIL_EVENT_RX_FIFO_ALMOST_FULL or RAIL_EVENT_TX_FIFO_ALMOST_EMPTY could trigger improperly when the event is enabled or the FIFO is reset.</td>
<td></td>
</tr>
<tr>
<td>1017609</td>
<td>Fixed an issue where PTI appended information could be corrupted when RAIL_RX_OPTION_TRACK_ABORTED_FRAMES is in effect when RAIL_IDLE_FORCE_SHUTDOWN or RAIL_IDLE_FORCE_SHUTDOWN_CLEAR_FLAGS is used. Also clarified that RAIL_RX_OPTION_TRACK_ABORTED_FRAMES is not useful with coded PHYs.</td>
<td></td>
</tr>
<tr>
<td>1019590</td>
<td>Fixed an issue when using the &quot;RAIL Utility, Coexistence&quot; component with BLE where the sl_bt_system_get_counters() function would always return 0 for GRANT denied counts.</td>
<td></td>
</tr>
<tr>
<td>1019794</td>
<td>Eliminated compiler warning in &quot;RAIL Utility, Initialization&quot; component when few of its features are enabled.</td>
<td></td>
</tr>
<tr>
<td>1023016</td>
<td>Fixed an issue on EFR32xG22 and newer chips where waits in between radio activity would consume slightly more power than necessary after the first 13 ms. This was especially noticeable when using RAIL_ConfigRxDutyCycle with large off time values.</td>
<td></td>
</tr>
<tr>
<td>1029740</td>
<td>Fixed issue where RAIL_GetRssi()/RAIL_GetRssiAlt() could return a &quot;stale&quot; RSSI value (the value was from previous RX state instead of the current one) if called quickly upon entering receive.</td>
<td></td>
</tr>
<tr>
<td>1040814</td>
<td>Added support to the &quot;RAIL Utility, Coexistence&quot; component for configuring the coexistence request priority on sync detect when using BLE.</td>
<td></td>
</tr>
<tr>
<td>1056207</td>
<td>Fixed an issue with IQ sampling when using the &quot;RAIL Utility, AoX&quot; component with only 0 or 1 antennas selected.</td>
<td></td>
</tr>
<tr>
<td>1062712</td>
<td>Fixed an issue where the &quot;RAIL Utility, Coexistence&quot; component would not always update request states correctly, which could lead to missed events triggered by new requests.</td>
<td></td>
</tr>
<tr>
<td>1062940</td>
<td>Prevented the &quot;RAIL Utility, Coexistence&quot; component from aborting BLE transmits when SL_RAIL_UTIL_COEX_BLE_TX_ABORT is disabled.</td>
<td></td>
</tr>
<tr>
<td>1063152</td>
<td>Fixed an issue where radio reception would not be fully cleaned up when a receive error occurred with receive state transitions set to idle on error but transmit on success, a configuration mostly associated with BLE. On the EFR32xG24 this could cause a SYNTH calibration to not be properly restored and eventually cause the radio to stop working.</td>
<td></td>
</tr>
</tbody>
</table>

---

**Using direct mode (or IQ) functionality on EFR32xG23 requires a specifically set radio configuration that is not yet supported by the radio configurator. For these requirements, reach out to technical support who could provide that configuration based on your specification.**

**Infinite receive operations where the frame's fixed length is set to 0 are not working correctly on the EFR32xG23 series chips.**

**On EFR32xG23:**
- Wi-SUN FSK mode 1a exhibits a PER floor with frequency offsets around ± 8 to 10 KHz
- Wi-SUN FSK mode 1b exhibits a PER floor with frequency offsets around ± 18 to 20 KHz

5 Using This Release

This release contains the following

- Radio Abstraction Interface Layer (RAIL) stack library
- Connect Stack Library
- RAIL and Connect Sample Applications
- RAIL and Connect Components and Application Framework

This SDK depends on Gecko Platform. The Gecko Platform code provides functionality that supports protocol plugins and APIs in the form of drivers and other lower layer features that interact directly with Silicon Labs chips and modules. Gecko Platform components include EMLIB, EMDRV, RAIL Library, NVM3, and mbedTLS. Gecko Platform release notes are available through Simplicity Studio’s Documentation tab.

For more information about the Flex SDK v3.x see UG103.13: RAIL Fundamentals and UG103.12: Silicon Labs Connect Fundamentals. If you are a first time user, see QSG168: Proprietary Flex SDK v3.x Quick Start Guide.

5.1 Installation and Use

The Proprietary Flex SDK is provided as part of the Gecko SDK (GSDK), the suite of Silicon Labs SDKs. To quickly get started with the GSDK, install Simplicity Studio 5, which will set up your development environment and walk you through GSDK installation. Simplicity Studio 5 includes everything needed for IoT product development with Silicon Labs devices, including a resource and project launcher, software configuration tools, full IDE with GNU toolchain, and analysis tools. Installation instructions are provided in the online Simplicity Studio 5 User’s Guide.

Alternatively, Gecko SDK may be installed manually by downloading or cloning the latest from GitHub. See https://github.com/SiliconLabs/gecko_sdk for more information.

Simplicity Studio installs the GSDK by default in:

- (Windows): C:\Users\<NAME>\SimplicityStudio\SDKs\gecko_sdk
- (MacOS): /Users/<NAME>/SimplicityStudio/SDKs/gecko_sdk

Documentation specific to the SDK version is installed with the SDK. Additional information can often be found in the knowledge base articles (KBAs). API references and other information about this and earlier releases is available on https://docs.silabs.com/.

5.2 Security Information

Secure Vault Integration

When deployed to Secure Vault High devices, sensitive keys are protected using the Secure Vault Key Management functionality. The following table shows the protected keys and their storage protection characteristics.

<table>
<thead>
<tr>
<th>Wrapped Key</th>
<th>Exportable / Non-Exportable</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Thread Master Key</td>
<td>Exportable</td>
<td>Must be exportable to form the TLVs</td>
</tr>
<tr>
<td>PSKc</td>
<td>Exportable</td>
<td>Must be exportable to form the TLVs</td>
</tr>
<tr>
<td>Key Encryption Key</td>
<td>Exportable</td>
<td>Must be exportable to form the TLVs</td>
</tr>
<tr>
<td>MLE Key</td>
<td>Non-Exportable</td>
<td></td>
</tr>
<tr>
<td>Temporary MLE Key</td>
<td>Non-Exportable</td>
<td></td>
</tr>
<tr>
<td>MAC Previous Key</td>
<td>Non-Exportable</td>
<td></td>
</tr>
<tr>
<td>MAC Current Key</td>
<td>Non-Exportable</td>
<td></td>
</tr>
<tr>
<td>MAC Next Key</td>
<td>Non-Exportable</td>
<td></td>
</tr>
</tbody>
</table>

Wrapped keys that are marked as “Non-Exportable” can be used but cannot be viewed or shared at runtime.

Wrapped keys that are marked as “Exportable” can be used or shared at runtime but remain encrypted while stored in flash.

For more information on Secure Vault Key Management functionality, see AN1271: Secure Key Storage.
Security Advisories

To subscribe to Security Advisories, log in to the Silicon Labs customer portal, then select **Account Home**. Click **HOME** to go to the portal home page and then click the **Manage Notifications** tile. Make sure that ‘Software/Security Advisory Notices & Product Change Notices (PCNs)’ is checked, and that you are subscribed at minimum for your platform and protocol. Click **Save** to save any changes.

5.3 Support

Development Kit customers are eligible for training and technical support. Use the [Silicon Labs Flex web page](http://www.silabs.com/support) to obtain information about all Silicon Labs Thread products and services, and to sign up for product support.

You can contact Silicon Laboratories support at [http://www.silabs.com/support](http://www.silabs.com/support).
Simplicity Studio

One-click access to MCU and wireless tools, documentation, software, source code libraries & more. Available for Windows, Mac and Linux!
