

Wi-SUN SDK 1.0.1.0 GA

Gecko SDK Suite 3.2

June 16, 2021

Wireless Smart Ubiquitous Network (Wi-SUN) is the leading IPv6 sub-GHz mesh technology for smart city and smart utility applications. Wi-SUN brings Smart Ubiquitous Networks to service providers, utilities, municipalities/local government, and other enterprises, by enabling interoperable, multi-service, and secure wireless mesh networks. Wi-SUN can be used for large-scale outdoor IoT wireless communication networks in a wide range of applications covering both line-powered and battery-powered nodes.

Silicon Labs' Wi-SUN hardware is certified by the Wi-SUN Alliance, a global industry association devoted to seamless LPWAN connectivity. Wi-SUN builds upon open standard internet protocols (IP) and APIs, enabling developers to extend existing infrastructure platforms to add new capabilities. Built to scale with long-range capabilities, high-data throughput and IPv6 support, Wi-SUN simplifies wireless infrastructure for industrial applications and the evolution of smart cities.

These release notes cover SDK versions:

- 1.0.1.0 released June 16, 2021
- 1.0.0.0 released May 10, 2021

KEY FEATURES

- FAN 1.0 Certified PHYs and Wi-SUN Stack
- CoAP Library
- Wi-SUN Sample Applications
- Wi-SUN Border Router Demo
- Wi-SUN Network Analyzer

Compatibility and Use Notices

For information about security updates and notices, see the Security chapter of the Gecko Platform Release notes installed with this SDK or on the [Silicon Labs Release Notes page](#). Silicon Labs also strongly recommends that you subscribe to Security Advisories for up-to-date information. For instructions, or if you are new to the Silicon Labs Wi-SUN SDK, see [Using This Release](#).

Compatible Compilers:

IAR Embedded Workbench for ARM (IAR-EWARM) version 8.50.9

- Using wine to build with the IarBuild.exe command line utility or IAR Embedded Workbench GUI on macOS or Linux could result in incorrect files being used due to collisions in wine's hashing algorithm for generating short file names.
- Customers on macOS or Linux are advised not to build with IAR outside of Simplicity Studio. Customers who do should carefully verify that the correct files are being used.

GCC (The GNU Compiler Collection) version 10.2.0, provided with Simplicity Studio.

1 Wi-SUN Stack

1.1 New Items

Added in release 1.0.0.0

Wi-SUN stack and SDK initial release

1.2 Improvements

None

1.3 Fixed Issues

Fixed in release 1.0.1.0

ID #	Description
701190	Fixed an issue causing a parent to lose track of its child frequency hopping sequence. The child router was sending an incorrect IFSU misleading the parent router and forcing him to be one frequency hop interval late.

Fixed in release 1.0.0.0

Wi-SUN stack and SDK initial release

1.4 Known Issues in the Current Release

Issues in bold were added since the previous release.

ID #	Description	Workaround
710923	The event SL_WISUN_MSG_CONNECTED_IND_ID can be fired although no new connection was established. It's confusing because it gives the impression that a deconnection followed by a new connection occurred but it is actually not the case. Can be reproduced with all the sample applications.	
714402	Wi-SUN border router in rare instances hits a hard fault with a very low occurrence. The command line interface is non-responsive and the router will not advertize anymore. Routers will eventually report a PAN timeout.	

1.5 Deprecated Items

None

1.6 Removed Items

None

2 Wi-SUN Applications

2.1 New Items

Added in release 1.0.0.0

New Applications:

- Wi-SUN - SoC CLI
- Wi-SUN - SoC Empty
- Wi-SUN - SoC Ping
- Wi-SUN - SoC UDP Server
- Wi-SUN - SoC UDP Client
- Wi-SUN - SoC TCP Server
- Wi-SUN - SoC TCP Client
- Wi-SUN - SoC Meter
- Wi-SUN - SoC Collector
- Wi-SUN - SoC CoAP Meter
- Wi-SUN - SoC CoAP Collector

New precompiled demos:

- Wi-SUN - SoC Border Router
- Wi-SUN - SoC Border Router with backhaul

Easy to use features (components):

- POSIX like Socket
- Application Core (event handling, connection handling, network configuration, etc.)
- CoAP (Constrained Application Protocol)

Radio Configurator Support (19 PHYs)

Simplicity Studio – Network Analyzer Wi-SUN Support

2.2 Improvements

None

2.3 Fixed Issues

None

2.4 Known Issues in the Current Release

Simplicity Studio – Network Analyzer: Wi-SUN Encrypted Packets are not supported yet

2.5 Deprecated Items

None

2.6 Removed Items

None

3 Using This Release

This release contains the following

- Wi-SUN stack library
- Wi-SUN sample applications
- Wi-SUN border router pre-compiled demos
- Documentation

If you are a first time user, see *QSG181: Silicon Labs Wi-SUN Quick-Start Guide*.

3.1 Installation and Use

A registered account at Silicon Labs is required in order to download the Silicon Labs Wi-SUN SDK. You can register at https://siliconlabs.force.com/apex/SL_CommunitiesSelfReg?form=short.

SDK installation instructions are covered in the [Simplicity Studio 5 User's Guide](#) and *QSG181: Silicon Labs Wi-SUN Quick-Start Guide*.

Use the Silicon Labs Wi-SUN SDK with the Silicon Labs Simplicity Studio 5 development platform. Simplicity Studio ensures that most software and tool compatibilities are managed correctly. Install software and board firmware updates promptly when you are notified.

Documentation specific to the SDK version is installed with the SDK.

3.2 Security Information

Secure Vault Integration

This version of the stack does not integrate Secure Vault Key Management.

Security Advisories

To subscribe to Security Advisories, log in to the Silicon Labs customer portal, then select **Account Home**. Click **HOME** to go to the portal home page and then click the **Manage Notifications** tile. Make sure that 'Software/Security Advisory Notices & Product Change Notices (PCNs)' is checked, and that you are subscribed at minimum for your platform and protocol. Click **Save** to save any changes.

Disclaimer

Silicon Labs intends to provide customers with the latest, accurate, and in-depth documentation of all peripherals and modules available for system and software implementers using or intending to use the Silicon Labs products. Characterization data, available modules and peripherals, memory sizes and memory addresses refer to each specific device, and "Typical" parameters provided can and do vary in different applications. Application examples described herein are for illustrative purposes only. Silicon Labs reserves the right to make changes without further notice to the product information, specifications, and descriptions herein, and does not give warranties as to the accuracy or completeness of the included information. Without prior notification, Silicon Labs may update product firmware during the manufacturing process for security or reliability reasons. Such changes will not alter the specifications or the performance of the product. Silicon Labs shall have no liability for the consequences of use of the information supplied in this document. This document does not imply or expressly grant any license to design or fabricate any integrated circuits. The products are not designed or authorized to be used within any FDA Class III devices, applications for which FDA premarket approval is required or Life Support Systems without the specific written consent of Silicon Labs. A "Life Support System" is any product or system intended to support or sustain life and/or health, which, if it fails, can be reasonably expected to result in significant personal injury or death. Silicon Labs products are not designed or authorized for military applications. Silicon Labs products shall under no circumstances be used in weapons of mass destruction including (but not limited to) nuclear, biological or chemical weapons, or missiles capable of delivering such weapons. Silicon Labs disclaims all express and implied warranties and shall not be responsible or liable for any injuries or damages related to use of a Silicon Labs product in such unauthorized applications.
