

PC System Requirements

Operating System:

The CBPro Project File Inspector Tool requires Windows XP Service Pack 2, Windows Vista Service Pack 2, Windows 7 Service Pack 1, Windows 8, or Windows 10. Either 32- and 64-bit versions are supported.

CBPro uses Microsoft.NET Framework version 4.0. The installer will check to see if it is installed and, if not, prompt to automatically download and install it. Windows 7 and higher PCs will normally already have .NET 4.0 installed.

If you need to install CBPro on a PC that does not have an Internet connection and does not have .NET 4.0, you can download Microsoft's stand-alone installer from <http://www.microsoft.com/en-us/download/details.aspx?id=17718>. Install I.NET 4.0 before running the CBPro installer.
